Empowering Teachers' Observations

Everyone who believes that massive testing is improving education

… raise your hand!

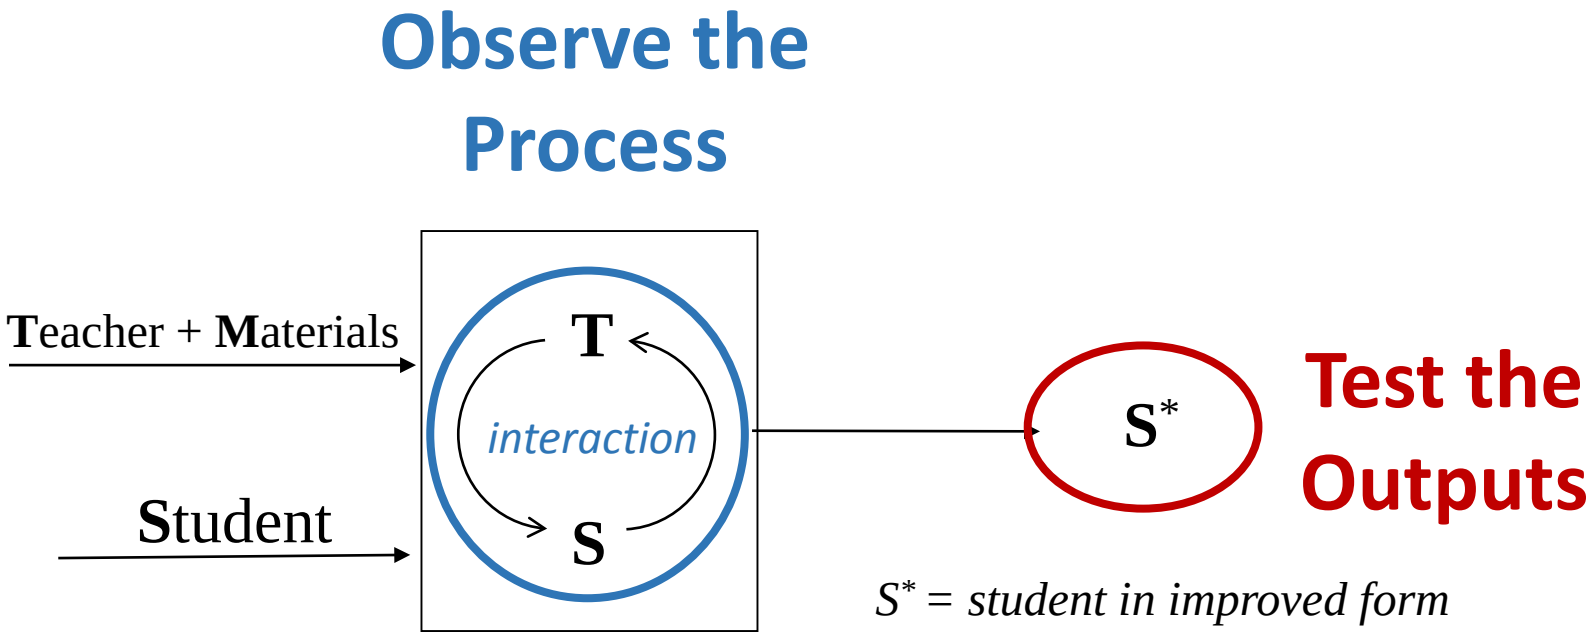
Two Places to Measure Education



Tests now dominate education

- Student advancement
- College entrance
- Design of curriculum
- Teacher pay and promotion
- School openings and closings
- School budgets
- Grants and programs
- Justify charter schools

Billions of $
Thousands of tools
Millions of users

… and teacher observations are far too often forgotten!

Teacher's written class notes? Gold stars?

Education needs both Testing and Process Observation

- Testing of **Outputs**
  - Students "take" tests to prove their knowledge
  - Students are motivated to learn … to advance and achieve goals
  - ***Schools use test results to track outcomes and institutional performance***

- Observing and recording the **Process**
  - Teachers observe students learning … to see what helps or hinders
  - Teachers record successes and failures … and the reasons for each
  - ***Use collaborative insights to motivate, remove barriers and teach to success***

Many students *"fail"* in standardized tests, but thrive with meaningful support

- Students with subject-matter learning blocks
- Students with attention disorders or English as a Second Language
- Students in private/charter schools with non-standard programs
- Students in corrections system (e.g., with interfering behaviors)
- Students in vocational or skills-based programs
- Special needs students (approx. 20% of all US students)
  - Unable to comply with the test instructions
  - Accommodations or Alternative Assessment

A Deeper View's Mission

Measure progress **through observation**

Observers record **their knowledge** of individual student performance.

ADV Tracking System

Teachers record observations of students' performance and problems
… in seconds … as they work … during normal classroom activities.
Results are organized with other observations and produce a deeper view of progress.

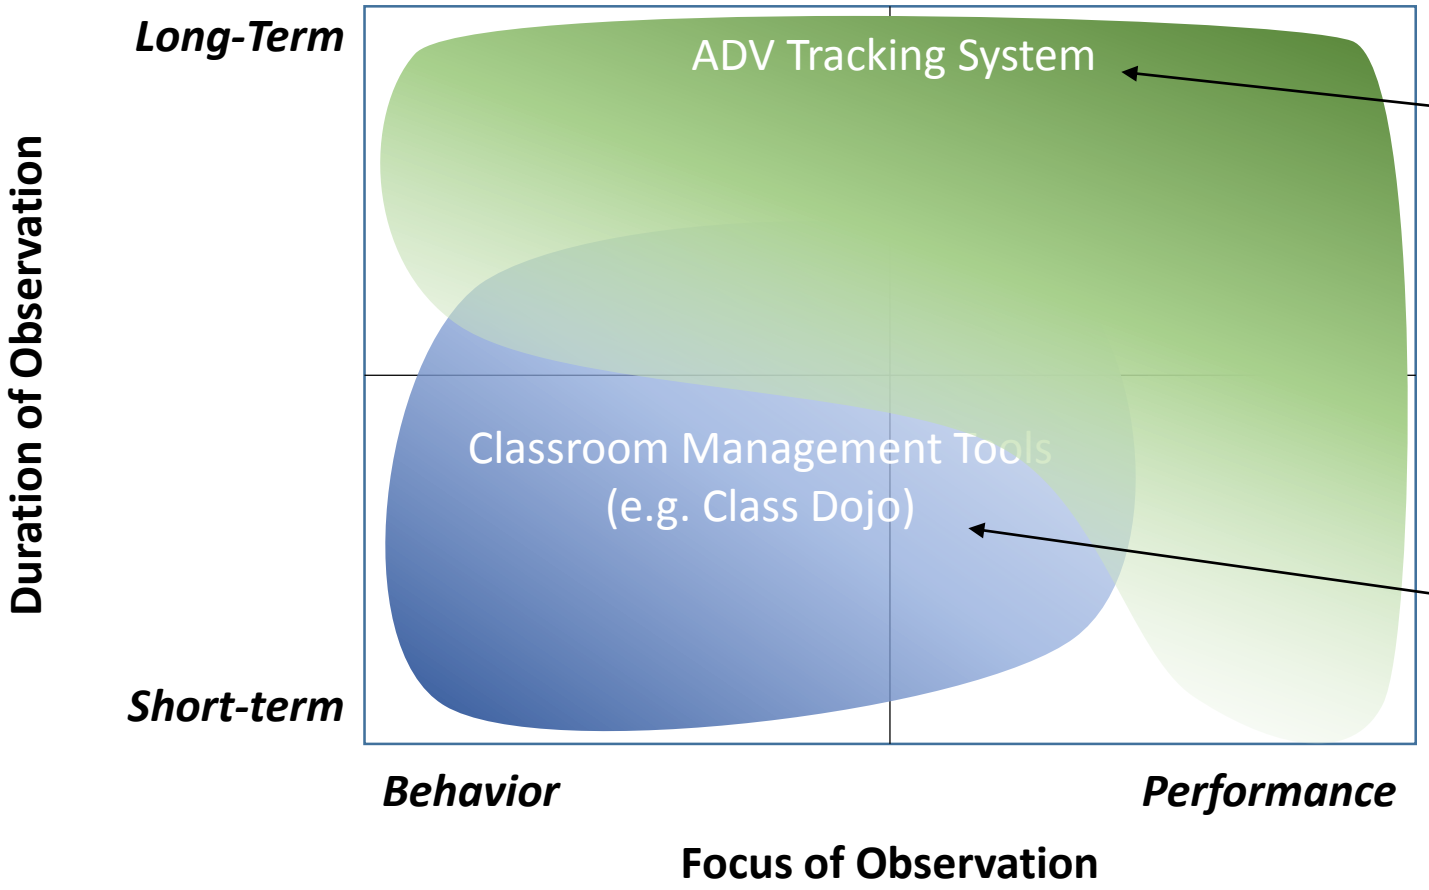
Where Does ADV Tracking System Fit?



Special Needs

20% of 45.1M children age 3 to 13

5% of 16M adolescents age 14 to 19

approx. 10M children

General Population

80% of 28.7M children age 3 to 9

approx. 23M children

A Deeper View Tracking System measures progress **through the teacher's eyes**

- Daily work is observed and recorded by experts (e.g., teachers)
- Work is measured often, on smaller tasks … accounting for distractions, negative behaviors and reinforcements.
- Resulting data is graphed for actionable intervention.
- Notes are stored when new observations take place or shortly after.
- Long term portfolios capture individual growth and achievement.
- Produce an accountability trail of interventions and results.
- Identify individual 'best practices' of instruction for each learner.

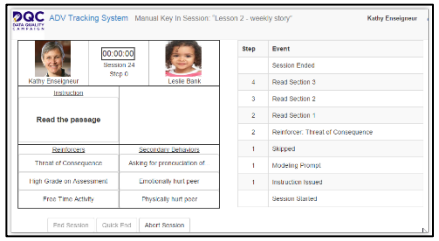
Performance Observation

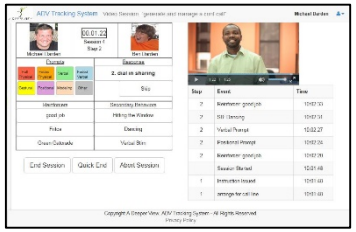
Real-time, In-Class Observation

It will take this child 20 sec to solve the problem

It will take this teacher 15 sec to record 3 observations about his performance



Offline Entry



Code from Video
(remote or special needs)

One Touch Technology

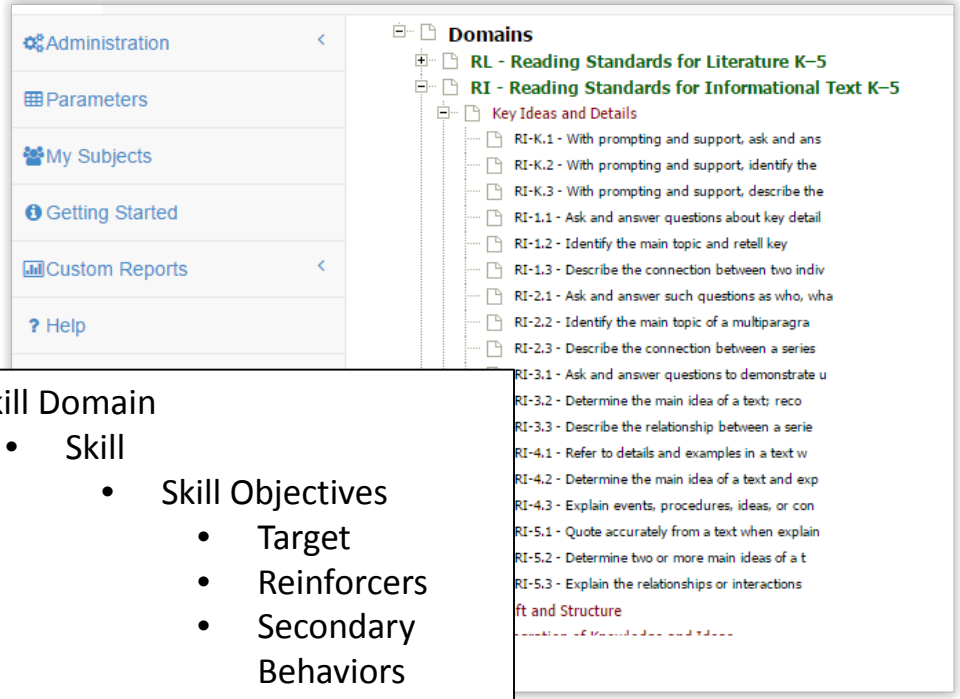
Ongoing Stakeholder Collaboration

Teachers, consultants, therapists & administrators share data in real time

Copyright 2014 - A Deeper View

Rubric Design and Maintenance

Multi-Level Rubric



- Skill Domain
  - Skill
    - Skill Objectives
      - Target
      - Reinforcers
      - Secondary Behaviors
      - Session Quality

Detailed rubrics allowed detailed observation and reporting:

- Rubrics can be customized to the individual student
- Rubrics can be copied across students, classes and schools
- Standard rubrics can be shared, tracked and adjusted
- Rubrics enable deeper analysis of learning trends

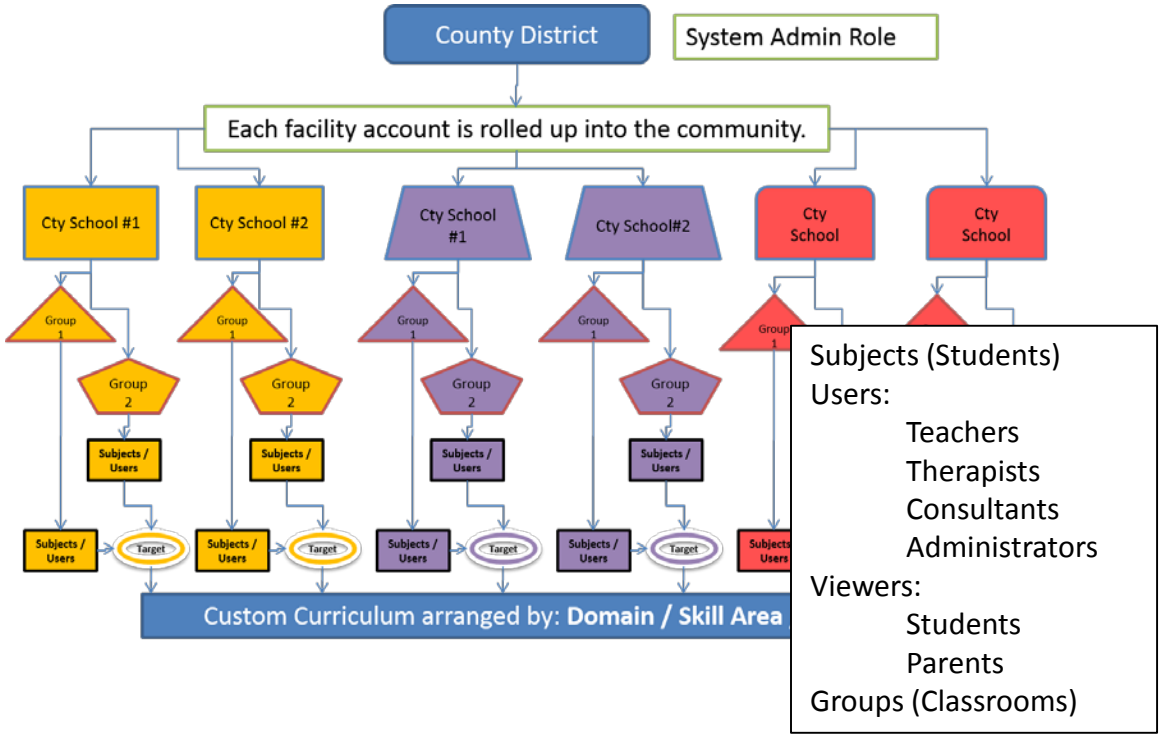
Stakeholder Management System

Designed and Structured for Large-Scale Deployment

- Roles and permissions
- Access controls
- Scalability
- Collaboration
- Responsive and portable
- Data exporting

Multi-Tiered Stakeholder Management



Copyright 2014 - A Deeper View

Capture teacher insights to drive better teaching … and better learning

- Set task targets for schools, groups and classes
- Customize targets for individual subjects
- Record in-class observations of successes and problems
- Associate outcomes with motivators and resistances
- Assemble everything into subject profiles
- Share profiles among authorized stakeholders

American education needs

- A system that views teaching as a “service”.
- A system that can diagnose teaching in real time.
- A way to measure students who don’t test well.
- A way to support teachers in their natural role.
- A counterweight to excessive testing.
- A way to measure everyone fairly.

A Deeper View Team
Preparation, Experience and Motivation

CEO:

- Brought disruptive technology platform through IPO in 2003 – Sold in 2006
- Built, marketed and 'piloted' the ADV Tracking System to 300+ public and private schools in 2010.
- Persevered with technology when *lawsuit forced system off market for 4 years*
- Has brought it back … newer and better

Sr. Management Team:

- Decades of top-tier academic research in education
- Decades of experience in web technology management
- Decades of experience in business processes and operations
- Decades of experience with educational technology ("inverted" distance instruction and e-learning).
- Decades of experienced in marketing, sales and messaging
